

## Press Release

### High End 2009 in Munich

#### Burmester Audiosysteme GmbH, Berlin

Exhibition Room: D106 im Atrium 3, 1. OG

##### The Burmester Novelties on the HIGH END 2009:

**088 Pre Amp**

The **Top Line 088 Pre Amp** benefits from established developments, which have already leveraged the Reference Line 077 Pre Amp to its extraordinary sound qualities. The 088 provides five balanced inputs, which can all be named individually, and one Surround Thruput. It has as one balanced output, a headphone jack and Tape Out. In addition, it is supplied with a module slot for an optional Phono MC, MM or DA converter with 96kHz/24bit or 192kHz/24bit switch-over. Burmester X-AMP 2 output stages and double-mono construction are part of the 088's concept. Deliverable in September 2009.

**089 CD Player**

##### The Top Line 089 CD Player

The Burmester-invented interplay between belt drive, SRC function (Sample Rate Conversion), which is switchable from 96kHz/24bit to 192kHz/24bit with according conversion, has set the standard worldwide for many years. The 089 is designed as Top Loader and has two digital inputs and one analog balanced input. Via this input, the 089 can be used as pre amp, as well. The Burmester X-AMP 2 output stages with discrete assembly are responsible for the typical Burmester sound. Deliverable in September 2009.

**069 CD Player with integrated power supply**

The internationally awarded **Reference Line 069 CD Player** is now available as single box unit with newly developed internal power supply. The 069 is driven by the Burmester Reference Belt Drive. It provides three digital and one analog input. Digital and analog outputs are provided as well. In addition, the 069 is supplied with balanced circuitry with modular DA converter. Due to its air- and sound-proof chamber system, the 069 is absolutely indifferent to interferences. The 069's Setup Menu allows numerous individual settings. Further features of the 069 are its library function (BurLib) and BurLink. Deliverable in July 2009.

**B20 Loudspeaker**

In addition to this, we are introducing a new generation of Burmester loudspeakers. The new 2-way bass reflex **loudspeakers B20 und B30** combine high-quality components, appealing design and cutting-edge Burmester technology, like the mid-range chassis, exclusively developed for Burmester. The **B30's** fine dynamics are one of its most convincing features. The **B20** has a surprising bass foundation despite humble dimensions. The speaker cabinets of B20 and B30 are completely manufactured in Germany.

Further information, also regarding the cooperation of Porsche and Burmester, will be provided directly at
