The QRT Qv2 AC Line Harmonizer

The QVIBE Qv2 is designed to enhance the musical performance and picture quality of any audio or video system, delivering readily demonstrable benefits at an incredibly affordable price. It can be used as a "stand alone" product or to complement a full QRT system with a QBASE and Qx2 or Qx4. The Qv2 works directly on the AC line, introducing a carefully calculated range of pulsed frequencies, clocked from the original 50 or 60Hz waveform. The result is a drop in noise floor, with a commensurate increase in image depth, dimensionality and presence, significantly increasing the realism of both musical and visual performance. Like other QRT products, the benefits are cumulative and Qv2s are even more impressive when used en masse.

The compact, "plug-top" construction of the Qv2's mechanically tuned high-tech housing allows it to be inserted into any free socket on your system's AC line – although adding directly to a QBASE maximizes the benefits. Available in either US NEMA or Eu Schuko configurations, and compatible

with 50/60Hz 100 – 240V supplies, standard adaptors can be used to employ the Qv2 in other markets.

- Improves both sound and picture quality in any system.
- Effective on its own or complementing other QRT products.
- Increases the depth, presence and realism of the musical or movie performance.
- Clearly audible, visible and measurable results.
- Mechanically tuned carbon fiber housing.
- High Quality Gold plated connection pins.
- Built in the USA.
- 2 Year Warranty
